

BetterAir's 100%  Environmental Probiotics create a healthier and cleaner environment for you and your loved ones!

Diminishes bad odors and purifies the air with continuous probiotic misting

Dramatically reduces dust mites, allergens, mold and harmful bacteria that reside in your baby's mattress, toys and blankets

Cleans surfaces by depleting the resources that bad bacteria thrive on

Continuous bio-security and creation of healthy microbiome

100% safe and environmentally friendly

Our mission is to improve peoples' lives by creating an ecological balance and treating the indoor environment as a whole; purifying the air, surfaces and inside objects of mold, allergens and harmful bacteria. We offer a range of products accommodating large-scale commercial buildings, small residential spaces and even portable on-the-go sprays. BetterAir is 100% safe, organic, Non-GMO and biodegradable.

# Breathe probiotics. Just good bacteria.

Let's face it—  
bad bacteria live  
in your home

Allergens, mold and other microbial creatures live and grow on and inside surfaces including mattresses, toys, electronic devices, stuffed animals and door handles. Create a balanced, healthy and clean indoor environment for you and your loved ones!

## The #dirtytruth

Mattresses contains 10 million dust mites on average, the leading cause of allergies in the United States.

Do you know who you're sleeping with?

The power of probiotics in your home

### What are probiotics?

Probiotics are naturally occurring live bacteria and yeasts that are beneficial to overall immunity and known to improve digestion.

### BetterAir's 100% Environmental Probiotics

Our technology introduces the power of Environmental Probiotics into enclosed living and work spaces. BetterAir's 100% Environmental Probiotics are comprised of a carefully cultured strain of probiotics called Bacillus ferment; similar to the kind commonly found in yogurts, dietary supplements and beverages.

Environmental Probiotics infiltrate any space, visible or not and compete for the resources that allergens, pathogens and mold thrive on. Rather than eliminating all bacteria and creating a sterile environment, BetterAir's Environmental Probiotics create a less hospitable

environment for harmful bacteria to reproduce and mutate into resilient superbugs.

As the first and only probiotic air and surface purifier, BetterAir leverages the power of good bacteria to create a more balanced environment with cleaner air and surfaces, and a better quality of life.

BetterAir's 100% Environmental Probiotics are FDA registered, 100% organic and can be safely administered in homes, offices, schools, hotels and hospitals, as well as mass transportation including buses, trains, airplanes, and ships.

Experience BetterAir

### For your home

Your home is your safe place. And it is for mold and other bacteria, too. In optimal conditions, like moist places in your kitchen, bacteria thrive. Some sources in your kitchen include steamy areas, humid sponges, moist coffee sets and porous cutting boards. BetterAir's 100% natural Environmental Probiotics will penetrate the spaces you can't touch or see.

### For your office

Did you know a working adult touches as many as 30 objects a day? These objects may be contaminated with bacteria causing infectious diseases. You may think the toilet is more contaminated, but wait until you check your keyboard and mouse. BetterAir releases probiotics in your office environment, reaching spaces and surfaces you work with every day, so you don't have to stress about mingling with co-workers (if you want to).

### On-the-go

Who are you traveling with? Pathogens thrive in enclosed spaces and in locations with large numbers of people—becoming the most common cause of respiratory infections in travelers. The BA on-the-go probiotic spray is your perfect travel accessory—protect your personal space from bad bacteria, nasty allergens and mold.

So, what are you breathing today?

Up to 800 sq. ft.

**BA-008**  
BetterAir's Probiotic Eco Balancing System (BA-008) is best for indoor spaces up to 800 sq. ft. including homes, small offices, clinics, classrooms and hotel rooms.
