

BSE Ion Distribution Systems

Needlepoint Bipolar Ionization and How It Works:

Needlepoint Bipolar Ionization as been proven to be effective against: Coronavirus, Norovirus, MRSA, Listeria, C-Diff, SARS, Strep, Legionella, E. Coli, and Swine Flu. Ionization is effective against VOCs, Odors, Mold, Mildew; and causes the agglomeration of airborne contaminants like particulate or molecules, aiding filtration capture or causing them to drop out of breathing areas sooner by increasing their mass.

Perfect for Public Areas:

Offices, Lobby Spaces, Libraries, Museums, Restaurants, Hotels, Dining areas, Educational facilities, Senior Living, Workout Rooms or Gyms, Locker rooms, Public Transit Spaces, Elevators, Indoor Grow Operations. Anyplace where people may congregate, visit or travel through.

Locate Close To Sources of Pathogens:

Simple to install, these plug and play solutions, have a patented dispersion method maximizing ion concentration where they are installed. They require **no modification** of existing air handling systems. **No contractors to pay**. Mount on a wall or ceiling or place it on a shelf and plug it into a standard wall outlet.

Studies Show the Following Efficiencies Against Concerning Pathogens:

Tuberculosis 69.09%, Norovirus 93.50%, MRSA 96.24%, Staphylococcus 96.24%, Mold Spores 99.50%,
 E.coli 99.69%, Coronavirus (COVID-19) 99% Airborne and 80% on Surfaces in 10 Minutes

Delivering Ionization To The Breathing Space

BSE Ion Distribution Units: Up to 1.2 Million Ions/cubic cm

Traditional HVAC Ionization: 3,000 - 5,000 Ions/cubic cm considered satisfactory
