Immunity Machine

The All New 8-Phase Filter!

The Austin Air Immunity Machine is the only air purifier on the market equipped with an advanced 8-phase filtration system, making it the most comprehensive air cleaning solution available today. Unlike other purifiers, which rely on limited filter media, the Immunity Machine combines 8 powerful filtration technologies to capture the widest range of airborne contaminants. From viruses, bacteria, mold spores to toxic chemicals, VOCs, and gases, this purifier targets the biological and chemical pollutants that are most harmful to the human immune system.

Superior Chemical, Virus, and Particle Capture

Phases 1 & 2: Prefilters – Medium and Large Prefilters capture visible dust, pet dander, pollen, and mold spores.

Phases 3–6: Four-Part Granular Defense Combo – A multi-phase mix of granulated carbon, impregnated carbon, zeolite, and impregnated zeolite adsorbs odors, VOCs, formaldehyde, ammonia, nitrogen dioxide, and other harmful gases.

Phase 7: Medical-Grade HEPA – Removes 99.97% of airborne particles down to 0.3 microns and 99% down to 0.1 microns, including viruses, bacteria, allergens, and microplastics.

Phase 8: HEGA Carbon Cloth – A military-grade filter originally designed for chemical, biological, and nuclear defense, eliminating the most dangerous ultra-fine contaminants including viruses.
