The Future of Mold Prevention – Today

A Safe and Effective Long-Term Solution
for Mold Prevention

Mold – the Unseen Threat

EPA data shows mold exploits HVAC / air ducts to grow and spread toxic spores throughout homes and facilities, increasing the likelihood of respiratory illnesses, including asthma.

Mold is a serious problem. Mold spores spread throughout the facilities causing health problems for people."

- National Air Duct Cleaning Association (NADCA)

Mold Is Everywhere

Mold spores are naturally occurring and present in all environments.

Mold spores can survive for years on surfaces and objects until conditions for growth are right!

Mold exposure is the root cause of multiple health problems, including allergic reactions, asthma attacks, and more severe respiratory conditions.

It's common to discover mold in HVAC systems and air ducts, allowing spores to spread throughout the building.

Contaminated HVAC ducts are particularly dangerous and can lead to Sick Building Syndrome and contribute to Building Related Illnesses (BRI).

Betterair – for better mold prevention

Betterair's devices work continuously to promote a **healthy ecologic balance** that inhibits mold growth, adopting a holistic approach that addresses the root of the problem.

Betterair's **Enviro-Biotics®** generate a probiotic layer throughout your interior spaces that consume mold spores before they can germinate into living mold.

Enviro-Biotics® consume food sources that living mold needs to grow and propagate creating an inhibition-of-growth zone, preventing further spread of living mold.

The Betterair Advantage

Traditional remediation methods of addressing mold infestation don't provide long term prevention and protection against mold spores which can persist for years and regenerate quickly.

They also aren't eco-friendly.

Betterair: a game-changer in mold prevention, creating a layer of eco-friendly, active probiotics throughout your home or facility.

This approach continuously inhibits mold growth on surfaces, objects and throughout ventilation systems resulting in a healthier indoor environment.

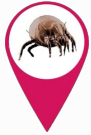

"Betterair has the potential to revolutionize the way we tackle indoor biological contamination,"

Dr. Martin Bluth

How Betterair Works

MOLD

VIRUS

Allergen

Pathogenic
Bacteria

01

Molds, pathogens and allergens accumulate on surfaces and spread to the air

02

Betterair's devices disperse Enviro-Biotics® the room creating a healthy probiotic layer.

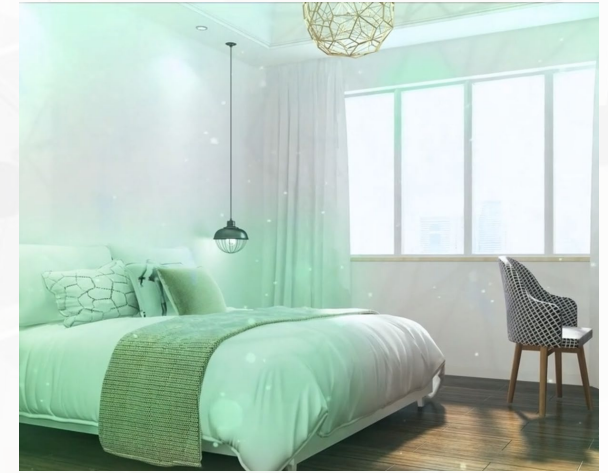

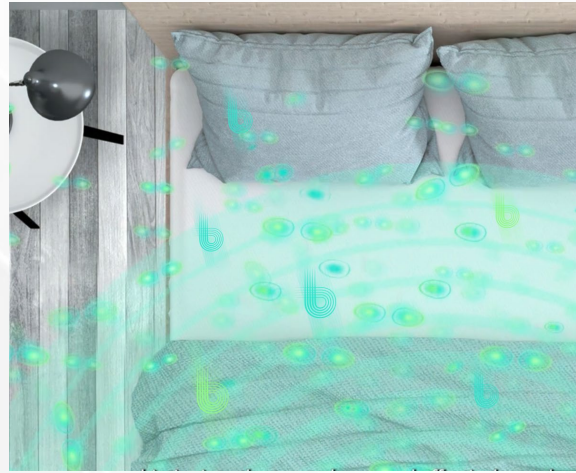

03

Molds and pathogens are removed as our probiotics consume allergens and other food sources.

04

The room is naturally purified with hypo-allergenic objects and surfaces and fresher, healthier... better air.

The Benefits of Betterair

Betterair's products prevents the spread of mold, germs and other irritants that can cause a variety of health/hygiene problems.

betterair Significantly reduces:

Bad odors

Asthma triggers

Toxic Mold spores

Allergic reactions & irritations

Dust mite allergens

Pet dander and odors

Coughing & scratchy throat

runny nose

Red eyes

Transmission of infectious diseases

Betterair for Better Living

Long term, effective solution – addresses mold infestation and doesn't let it return

Eliminates mold spores before they can germinate into living mold

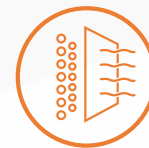

Creates a hypo-allergenic safe zone free of organic allergens

Removes – rather than just masking – odors, leaving the treated space fresh and clean, with no lingering moldy or stale scent

Minimizes the presence of harmful allergens and pathogens

Creates a healthier indoor environment

Betterair – Safety First

Betterair is committed to creating a safer and healthier indoor environment. That begins with guaranteeing the safety of our products. Our labs are discovering new benefits all the time.

Enviro-Biotics® are the first and only probiotic purifier unconditionally approved for direct application to indoor space by the US EPA.

Mold is everywhere

Mold exposure can cause various health problems, including allergic reactions, asthma attacks, and more severe respiratory conditions.

Individuals with weakened immune systems are particularly vulnerable.
